No. 34

LARGEST GALLOWES FRAME

**Gold & Silver Prince Has
Completed Installation
of Its Magnificent
Plant.**

The Gold & Silver Prince Mining company now boasts of having the largest gallowes frame in the camp. It was raised into position last Monday; is 42 feet high and rests upon an 18-foot sub bent which makes it really 60 feet in height. It is constructed of 10x12 and 10x10 timbers and was designed by George E. Cox, general manager of the Golden Prince and also heavily interested as a stockholder in the Gold & Silver Prince.

The mine is equipped with a 25-h. p. Alamo gasoline engine, compressor and machine drills. These were placed in service yesterday morning and the task of driving the shaft to the deep has been undertaken. The shaft was started on April 12 and carried down to 60 feet depth by hand; last night it had reached the 75-foot point.

Within a few days the machinery will be enclosed in a fire proof building and all in all, there is no finer equipment anywhere in the camp. The engine is not as large as the one at the Pioche King or Day mines but the management contends that the capacity is ample to carry the mine through the prospective stages. Adjacent to the plant is to be installed the electric generator from which the associated mines and buildings will be supplied with light. It is evident from the way the Golden Prince and the Gold & Silver Prince people are going at things that they have the utmost confidence in the ultimate outcome of the campaign of development now in progress. The improvements being made are of a most substantial character and those behind the enterprise are satisfied that they are going to add at least two more to the camp's cortege of big wealth producers.

STRIKE IN GOLDEN PRINCE.

**Shaft Drops Into Manganese Vein
At Depth of 430 Feet.**

The management of the Golden Prince Mining company is exulting over the steady improvement in its property, which is adjacent to the Pioche King. Another manganese vein was encountered in the shaft night before last and according to late reports from the mine, the entire bottom of the shaft is in low grade ore. This strike was made at a depth of 430 feet. The west drift has been run out 140 feet and this morning the face was in material containing good assay values. The east drift has been run 130 feet, but has not reached the point where mineral is expected. Nevertheless, Manager Cox would not be surprised to break into ore almost any day.

RECEIPTS OF LAND OFFICE DURING APRIL.

The following statement from the State Land office gives an idea of the amount of business which passed through that office during the month of April:

Payment of interest on contracts.....	\$ 10,330.96
Full payment on contracts.....	84,214.93
First payment on application for 6,673.88 acres.....	1,678.48
Second and full payment on application.....	80.00
Total.....	\$106,304.37

Intense Building Activity Manifest In Prince Zone.

Between the echo from the blasts which are tearing open the treasure vaults contained in the hills across the range from Pioche, the sound of the hammer and saw are heard on the premises of the Golden Prince and Gold & Silver Prince companies.

The spacious office building erected midway between these two mines, has been finished all but putting on some of the interior embellishments. Excavations for the boarding house, where the employees of each company are to be fed, were completed several days ago; practically all of the lumber is on the ground, and

within the next few hours a force of carpenters will begin the task of throwing the timbers together.

Within a stone's throw of the new office, excavations for the new residences of Dean R. Low, president of the Gold & Silver Prince, and George E. Cox, general manager of the Golden Prince, have been dug. The contract for the erection of these structures was let yesterday, with the strict injunction that the work on them shall begin without a moment's delay. Both houses will contain modern conveniences, and fitted up in a way that to the occupants life on the desert will be worth living.

Among other improvements at these mines will be an assay office, one of the necessary adjuncts belonging to any well regulated mining proposition. From Mr. Low it has been learned that the building is to be built right away and that it will contain all the facilities usually found in a place of this kind. Heretofore if either company desired rock tested it has been customary to turn the work over to some custom assayer.

In the future, all assaying and the working out of any metallurgical problems will be done on the ground.

PIOCHE KING SHAFT GOING DOWN RAPIDLY

One of the busiest places over in the Prince zone is the Pioche King mine where Contractor Fredrick is going to the deep with the big double compartment shaft as rapidly as men and machinery can do it. The shaft is to be carried on down to the 300 without a stop and at that point it is the intention to drive a cross-cut towards the rich fissures developed in the Prince Consolidated, and which certainly continue on into Pioche King ground.

There has been considerable call for Pioche King stock during the past week and brokers on the Salt Lake exchange bid as high as 28 cents for it, with no offerings. It is predicted by some that the stock will be selling at \$1 a share within sixty days. Once the rich fissures are cut, the price will advance by leaps and bounds.

TONOPAH MAY BE TERMINUS OF ROAD.

The railroad from Ely may make Tonopah its southwestern terminus, says the Tonopah Sun.

"For some weeks past the people of Tonopah, who worked strenuously to obtain the line, have been discouraged because of alleged topographical difficulties that militated against bringing the ore road to this city.

"It now appears as though the fears were somewhat premature. The people who were proposing to build this important railroad are also heavily interested in mines in Tonopah and are looking to this camp for a large amount of tonnage.

"A surveying party arrived in Tonopah yesterday and the men began work this morning running a line out of Tonopah. It is proposed to cross the Halifax summit and hug the hills until the valley level is reached, making the line somewhat devious but of easy grade and not difficult of construction."

MANAGER TAYLOR BUYS EQUIPMENT FOR X-RAY.

Manager J. W. Taylor of the X-Ray Mining company went to Salt Lake this week where he closed a deal with Fairbanks, Morse & Company for a 40-h. p. gasoline engine and compressor. The plant has been shipped and will be installed just as soon after its arrival as possible.

The X-Ray company has mapped out a very vigorous development campaign for its property in the Highland district and officials have the utmost confidence that the summer will not be very far advanced before they begin to reap substantial results.

McLaughlin In Camp Again.

J. F. McLaughlin, of Wapello, Iowa, has arrived in camp and will spend several weeks here looking after mining interests. He has made a practice of coming west about once a year for several years. He has great faith in the future of this district and is not afraid to put his money into development.

SAVAGE MURDER TRIAL

**Venire Issued for Seventy-five Jurors to Serve on
Case Which Comes
Up June First**

The trial of William Savage and Michael J. Miller, charged with the murder of Cleve Carter, while the latter was attending to his duties as foreman of the Boston & Pioche mine is scheduled to come up in the district court on June 1, with Judge Pike of Reno, presiding.

A special venire for 75 jurors has been issued and Sheriff Smith and his deputies are now busy serving summons. Attorneys for both sides are also busy making preparations with every indication that the legal battle, upon which depends the fate of two human beings, will be a hotly contested one. In the meantime, the prisoners languish in the county jail where they have been confined ever since their arrest by Deputy Sheriff Fitzgerald soon after the tragedy was enacted. Jail life has been telling on the men and they do not present the robust appearance that they did when first taken into custody.

Miller, it is said, feels hopeful of being acquitted. He has claimed all along that he had nothing to do with the tragedy; that he was simply a victim of circumstances. But the prosecution will contend that if he had been innocent of any wrongdoing he would not have accompanied Savage back to town and run amuck with Deputy Fitzgerald.

In Savage's behalf, the attorneys for the defense will probably argue that Savage Shot Carter in self defense. On the other hand, the prosecution will attempt to establish that the deed was deliberately planned; that the defendants sought revenge, by first attempting the destruction of the shaft at the Boston & Pioche mine by means of explosives and then ending the career of Carter by killing him.

District Attorney J. M. Breeze will direct the prosecution of the case; while Charles Lee Horsey of this city and Judge M. M. Warner of Salt Lake look after the legal interests of the defendants. It is understood that the district attorney will have

assistance in the prosecution of the case; but as yet, the name of the attorney has not been divulged.

Carter was shot March 5 and died on Sunday morning, March 7. The remains were conveyed to St George, Utah, where he formerly resided—for interment.

INTERNATIONAL MAN EXAMINES MINES.

Allen H. Rodgers, mining engineer, after spending two weeks in making an examination of the principal mines of the camp, has taken his departure. It is believed that his visit here was in the interest of none other than the International Smelting company, his report to follow those of Viehie, James Bren and William Bradley.

Mr. Rodgers covered the same ground traversed by the engineers who preceded him and in both the Prince Consolidated and Day has had opportunity to see development which have bordered on the sensational.

BOSTON & PIOCHE IS PUSHING DEVELOPMENT.

The Boston & Pioche, controlled by the Scott Mines company, is working a force of twenty men on development. This company has mapped out an active development campaign and there will be no let-up in the vigor being displayed there during the present year.

Superintendent Earl R. Pembroke has more than a car load of high grade silver-lead ore in the bins which was encountered during the regular progress of development.

DEATH OF YOUNG VOCALIST.

Mrs. Duckworth's Neice Meets Tragical Fate At Provo.

Mrs. T. O. Duckworth was called to Fillmore, Utah, early in the week to attend the funeral of her neice, Miss Edna Huntsman, who was the victim of a railroad accident at Provo, Utah, on the 14th inst. The young lady was a student in the B. Y. University, where she was taking voice culture under the direction of Prof. Lund.

It appears that the unfortunate girl was looking for friends from Springville and went to the Denver & Rio Grande depot to meet them. Hearing the whistle of an engine, she stepped out to see it approach the station; failing to notice a train coming from the opposite direction walked directly in front of it and before she could be warned of the danger was struck by the locomotive. Her right leg was broken and other injuries were sustained, from the effects of which she expired a few hours later.

Miss Huntsman was very popular among her school mates and was regarded as having an exceedingly promising future. She was 17 years of age.

Mrs. Duckworth left Fillmore yesterday for Salt Lake where she will remain during the summer.

PRINCE CON. LOW GRADE SENT OUT

**One Hundred Tons of Manganese Ore Shipped to
Smelter in Tintic
This Week**

Things are moving on the Prince Consolidated side of the camp at a rapid pace. As a visitor said a few days ago: "It looks like business over that way." All along the line from the Prince to the Pioche Metal mine, covering a distance of about five miles, intense activity is in evidence.

At the Prince mine, Sup't. William Lloyd has his well organized force working on development and ore extraction and he informs the Record that the first 100 tons of manganese ore for the Tintic smelter has been shipped and that teams are now drawing high grade material over to the railroad.

"We are greatly handicapped," said Mr. Lloyd today, "on account of the difficulty experienced in securing teams; but Bob Lund has pressed all of the teams he can spare into Prince ore service."

Mr. Lloyd said that the Prince mine never looked better and that recent developments have been of a highly gratifying character. New ore bodies containing sensational values have been exposed and he relates that in the south drift of the winze, sunk from the 400-foot level, a bedded vein has been encountered showing a width of 10 feet of ore. Four feet of this vein, according to assays resulting from a careful sampling, shows average values of 300 ounces in silver, 45 per cent lead and \$5.00 in gold.

On the 550 level, ore has been exposed for 160 feet in fissure No. 1. A raise about midway opened into another vein of high grade material, three feet of which assays 200 ounces in silver and 40 per cent lead.

Another important piece of work just undertaken in the Prince, is the sinking of a winze on the main fissure from the 500 level, and which is to be carried on down to the underlying quartzite formations.

Sup't. Lloyd states that steady shipments of both high and low grade ore will be made from now on.

BULLION TAX MAN. James F. Haley Visits Camp With State Auditor Ligon.

James F. Haley, state license and bullion tax collector, and W. B. Ligon, state auditor, were in the city this week. Mr. Haley came on business connected with his department while the purpose of Mr. Ligon's visit was to check up the books of the county auditor, which is one of the duties incumbent upon him at least two times a year.

Mr. Haley brought cheerful news about the mines in other parts of the state; asserting that there has been a marked improvement in conditions as compared as to what they were a year ago.

As evidence of this, Mr. Haley says the amount of bullion tax collected during the first quarter of this year is about six times greater than during the corresponding period of last year.

Mr. Haley reports that an arbitrary assessment of \$1,250,000 has been made against the Pittsburg Silver Peak Mining company at Blair; the reason being that its officials had reported incorrect returns on the bullion output of the mine last year.
